

CHRISTIAN S. J. JENSEN

Mexico City, Mexico | chrsjensen@yahoo.com | [linkedin.com/in/chrsjensen](https://www.linkedin.com/in/chrsjensen)

15+ years taking digital products from zero to launch, from UI/UX design and backlog ownership to Agile delivery with distributed engineering teams, growing platforms to 175,000+ users.

Product & Delivery Lead | Product Owner | Agile Delivery Management | UI/UX Design | AI-Augmented Teams

- **Zero-to-One Product Delivery:** Took two platforms from concept to launch, shipping Ganax's MVP in 3 months and a full product in 6, and growing CanopyLAB from 0 to 175,000+ users.
- **Agile Delivery & Team Leadership:** Hired and led Vietnam-based engineering teams of up to 15 in Scrum, delivering ~95% of releases on schedule and managing a ~USD 500K annual technology budget without overruns.
- **AI-Augmented Product Development:** Built learning-style personalization algorithms before LLMs went mainstream and now embed AI agents for testing and code review, AI chatbots and AI prototyping into delivery.

PROFESSIONAL EXPERIENCE

Product & Delivery Lead at Ganax

2023 – Present

An AI-powered influencer marketing platform built in Mexico, connecting consumer brands with creators through results-based campaigns.

Own product and delivery end to end, from roadmap and UI/UX design through sprint execution, QA and release. Lead a ~10-person team, including 8 Vietnam-based engineers, building a three-sided platform for creators, brand product owners and company admins in Django, React and Python.

Product Ownership & Strategy

- Took the platform from zero to one, designing the full UI and UX from scratch and shipping an MVP in 3 months and a full product in 6.
- Prioritize features and the roadmap with the CEO, turning business needs into design documentation, technical specs and user stories scoped with the lead architect.
- Analyze funnels, A/B tests, adoption, retention and campaign data with creator and brand feedback to prioritize iterations.
- Onboarded ~30 brands running campaign budgets of roughly USD 50K–100K each during an invite-only launch, with a growing waitlist ahead of public release.
- Run competitive research and market analysis to shape sprint and long-term roadmap planning.

Agile Delivery & Release Management

- Run Scrum in bi-weekly sprints, shipping 30+ sprints since 2023 and delivering ~95% of releases on schedule.
- Keep the Jira backlog groomed and prioritized, clear blockers and surface mid-sprint scope creep early so priorities can be reset without derailing delivery.
- Demo every feature and route it through QA before release, monitoring dashboards, bugs and customer escalations daily.
- Control team and delivery budgets, keeping every release within budget, and some under it, by scoping with a built-in buffer.

Team Leadership, Integrations & AI

- Hired ~10 team members, including 8 engineers, partly from a long-standing Vietnamese developer network, scaling capacity by sprint.
- Replaced spoken daily standups with written async updates in Slack, overcoming time zone and language barriers.
- Delivered Stripe payment and social media API integrations, managing each platform's documentation and verification process.
- Implemented an AI chatbot in the product and embedded AI agents into the workflow to automate testing and code review.
- Report delivery progress, roadmap and budget directly to co-founders, the board and investors.

Co-Founder at CanopyLAB

2011 – 2024

A social learning platform offering social science courses, free for young people and NGOs and paid for company onboarding, retention and training.

Co-founded the company and owned product design and delivery, creating all UI/UX and product documentation and hiring and managing the remote development team. Continues in an advisory capacity.

Product Growth & Discovery

- Grew the platform from 0 to 100,000+ users in five years and to ~175,000 users today, driven by word of mouth, conference speaking and SEO rather than paid advertising.
- Served hundreds of clients, including universities, Deloitte and Danish small and mid-sized companies.
- Shipped 15–20 major product releases, iterating on usage data and on client and user interviews run by student researchers.

AI Personalization

- Built proprietary personalization algorithms before LLMs went mainstream, mapping each learner's preferred style, such as writing, quizzes or brainstorming, to tailor every course individually.
- Trained the dataset in-house by answering questions thousands of times by hand, a project the team called "training your dragon," to make the algorithm production-ready.
- Personally hired the entire development team, scaling it to 15 people in a Vietnam-based model later carried over to Ganax.
- Managed a ~USD 500K annual technology budget and reported progress, risk and outcomes to the C-suite, board and investors.

Owner, Independent Design Practice at C/S/J/J

2011 – 2016

A one-person design studio delivering web design, publishing and marketing materials for Danish and international clients.

- Served ~10 clients, retaining several for all five years while working remotely between Denmark and Australia.
- Led graphic design, marketing and magazine production for Pixelz, a 2,000-employee image retouching company later acquired for a nine-figure DKK sum, which retained the studio for multiple years.
- Delivered web design, desktop publishing and brand materials from concept through final production.

Graphic Designer at Albatros Travel

2012 – 2014

A Danish travel company serving the Danish and German markets.

- Led marketing design for the Danish and German markets, producing all newspaper advertising and ongoing ad assignments.
- Created the first wireframes and designed the UI/UX for the company's mobile app.

VOLUNTEER EXPERIENCE

Contributing Writer at RÆSON

- Contributed written pieces on politics and current affairs.

Co-Facilitator at EU-Funded Youth Training Program

- Co-facilitated a week-long training program for young people, funded by an EU grant.

EDUCATION & PROFESSIONAL DEVELOPMENT

AP Degree, Design & Technology, UCN (University College of Northern Denmark)

Art History, Aarhus University

Studentereksamen, Language Line, Århus Akademi, Denmark | Exchange Student, Highland High School, California, USA

TECHNICAL SKILLS

Product & Delivery: Product Ownership, Roadmapping, Backlog Management, Sprint Planning, User Stories, Release Management

Agile & Collaboration: Scrum, Jira, Slack, Remote Team Management, Technical Documentation, Specs, Scope & Budget Control

Design & Prototyping: Figma, Sketch, Adobe Creative Suite, InDesign, Photoshop, Wireframing, UI/UX Design

AI Tools & Workflows: Lovable, Higgsfield, Midjourney, AI Agents for Testing & Code Review, AI Chatbots, AI-Assisted Prototyping

Platforms & Integrations: AWS, Google Cloud, Stripe, Social Media APIs, WordPress, CMS Platforms

Technical Fluency: Django, React, Python (working knowledge, non-developer)

Product Analytics: Funnel Analysis, A/B Testing, Adoption & Retention Metrics, Campaign Performance, SEO

Languages: Danish (Native), English (Fluent), Swedish, Norwegian, German (Working Knowledge)
